

Payments Formatting Guide

Deutsche Bank AG, Germany, US, UK

Deutsche Bank Trust Company Americas

Service overview

Straight-Through Processing (STP) of payment transactions is one of the cornerstones of Payments Clearing across the world. It is a basic requirement for fast, secure, and efficient processing of your and your customer's payment instructions. It is also a requirement for Deutsche Bank to be able to process your payment transactions in accordance with the cut-off times provided to Deutsche Bank's customer from time to time. It is the responsibility of the customer to ensure that all payment instructions contain complete and accurate information and data as set out in this Payments Formatting Guide. Deutsche Bank shall not be liable for any non-execution or defective execution of a payment transaction where the customer provides incorrect or incomplete information and/or data.

Bank to Bank Operation Field (72) Codewords

/INS/	Institution which instructed the sender or previous institutions in the transaction chain. This codeword should be used if field 52 is already filled in order to ensure that all institutions involved in the payment chain are included in the payment message.
/ACC/	Instructions following are for the account with institution: This codeword should not be used for STP reasons, and may be ignored or rejected
/REJT/ or /RETN/	Used to identify rejected or returned payments and avoid repair charging for such transactions. Either /REJT/ or /RETN/ in line with the SWIFT Guidelines can be used in the payment transaction

Information on Conditional Fields

Under specific circumstances, optional fields become conditional fields. This means that the fields must or must not be used, depending on other fields. Examples:

- If Field 56 is present, Field 57 must also be present.
- If Field 23E contains the code CHQB, subfield 1 (Account) in Field 59a is not allowed.
- If Field 71A contains OUR, then Field 71F is not allowed and Field 71G is optional.

For further details on conditional fields please refer to the SWIFT Standards, Network Validated Rules.

Information on Market Practice Guidelines (MPG) for the use of field 50a (Ordering Customer) and field 59a (Beneficiary Customer) with Option F to comply with the Wolfsberg Group's Payment Transparency Standards and FATF Recommendation 16**Field 50a, Option F Usage:**

Field 50F provides the possibility to structure the ordering customer information for validation by networks and processing applications. For this reason, in absence of a BIC, it is the preferred option. The minimum for field 50F is 2 lines: one for the subfield 1 'Party Identifier' and one for the subfield 2 'Name & Address':

- Subfield 1 'Party Identifier' must be present and must start with either a slash (Account option) or with a code of a restricted list (Identifier option).
- Subfield 2 'Name & Address' must be present. All lines must start with a number between 1 and 8 followed by a slash. As the subfield is mandatory, at a minimum one line containing the name of the ordering customer must be present in line with that format.

For subfield 1 'Party Identifier', one of the following line formats must be used:

/34x (Account) or 4!a/2!a/27x (Code)(Country Code)(Identifier)

When subfield 1 'Party Identifier' is used with the (Code)(Country Code)(Identifier) format, one of the codes as described within the SWIFT User Handbook must be used.

For subfield 2 'Name & Address', the following line format must be used:

1!n/33x (Number)(Details)

For option F, this means that the preferred usage is:

Subfield 1 'Party Identifier'	/((Account) or (Code)(Country Code)(Identifier)
Subfield 2 'Name & Address'	1/Name of the ordering customer 2/Address details 3/Country code/Town

PMPG recommendations:

- The preference for subfield 1 'Party Identifier' is to fill the Party Identifier with the account number of the ordering customer, preceded by a slash
- If no account number is available, the format (Code)(Country Code)(Identifier) must be used to fill in the subfield 1 'Party Identifier'
- Subfield 2 'Name & Address', concerning the 'Country and Town' (line starting with number 3), it is preferred that the Country Code and Town indicate the ordering customer's address verified as part of the customer due diligence.

Field 59a, Option F Usage:

Field 59F provides the possibility to structure the beneficiary customer information in order to facilitate anti money laundering (AML) screening and controls, which secure the business applications of banks. For these reasons, in absence of a BIC, it is the preferred option. In option F, the following format is:

- Subfield 1 ‘Account’ must include the account number of the beneficiary customer, preceded by a slash.
- Subfield 2 ‘Name & Address’ must be present. All lines must start with a number between 1 and 3 followed by a slash. This subfield should preferably detail the beneficiary customer’s address.

For option F, this means that the preferred usage is:

Subfield 1 ‘Account’	/Account Number
Subfield 2 ‘Name & Address’	1/Name of the beneficiary customer
	2/Address details
	3/Country code/Town

PMPG recommendations:

- If no account number is available, then subfield 1 ‘Account’ must carry a unique transaction identifier, preceded by a slash’
- It is preferred that the last line starts with number 3 followed by a slash ‘/’, followed by the ISO country code of the beneficiary customer’s address, followed by another slash ‘/’ and complemented with town, postal code, country subdivision, etc.

Option F – Preferred example: account number with name, address and country code/town
